Logmanager

ALVAO

LOGMANAGER & ALVAO

Enrich security events with context

By linking asset, user, and activity data from all your systems directly to related processes, you gain complete visibility for rapid incident response and meeting NIS2 requirements.

FAST SETUP, NO MAINTENANCE

PLUG & PLAY INTEGRATION

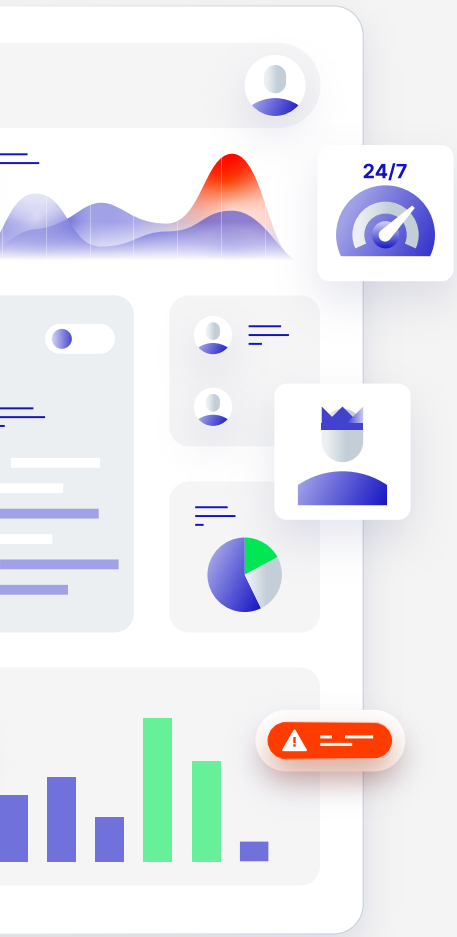

UNIFIED VISIBILITY

300+

SATISFIED CUSTOMERS

"The entire Logmanager platform is designed to be user-friendly and doesn't require extensive retraining of our IT staff."

JAN ZAPLETAL, SENIOR IT INFRASTRUCTURE SPECIALIST AT SSI SCHAEFER

Why Use Logmanager and ALVAO ITSM Together?

Prioritize threats and manage risks

Logs and security alerts are directly linked to requests in ALVAO, complete with defined processes, specific assignees, and deadlines (SLAs). This allows you to resolve security threats before they impact your organization's operations.

Prove regulatory compliance

Detected incidents on technical assets and related logs can be stored long-term in a secure, tamper-proof storage for audit trails, analysis, and to meet GDPR, NIS2, ISO 27001, and other regulatory requirements.

Speed up incident response

Logmanager enriches logs with metadata from technical assets stored in ALVAO, such as what the system is. This context significantly speeds up threat analysis and decision-making.

Save time during audits

By linking logs with assets in ALVAO, you can easily demonstrate who accessed a specific device or system, when, and how. This is crucial for audits and for maintaining regulatory compliance.

Detect shadow IT

If your log data shows activity from an unrecognized device, signaling the use of an unauthorized endpoint on the network, it triggers the appropriate process in ALVAO.

Ready to Get Started?

Email us at **sales@logmanager.com**. We'll discuss your needs and help you get the most out of Logmanager and ALVAO.

Logmanager is a Czech log management platform enriched with SIEM features. It dramatically simplifies incident response, troubleshooting, and regulatory compliance.

ALVAO develops solutions tightly integrated with the Microsoft environment, helping organizations optimize IT support, asset management, cybersecurity, and other business processes.
